

## Clinical activities

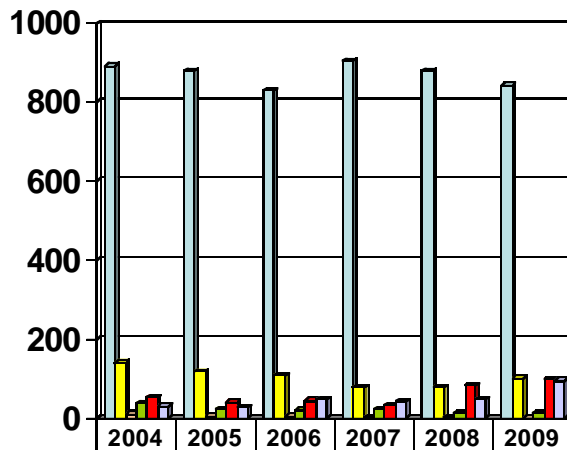

The anaesthesia and reanimation service and critical care unit carry out the following activities:

1. intra-operation anaesthesiological support for cardiac surgery (over 750 operations/year) and major vascular surgery (over 230 operations/year);
2. intra-operation anaesthesiological support for general surgery operations (over 3500/year) for both inpatients and outpatients;
3. support for patients admitted to the critical care unit (over 1000 patients/year). The patients are classified according to the following table.

## Number of patients admitted to intensive care

year 2004, etc...

□ cch	890	878	829	904	878	841
■ vasc	139	118	106	78	78	100
■ cch+vasc	9	5	5	3	1	0
■ cl (non chirurgico)	37	22	20	23	12	11
■ rachide	53	39	44	33	82	98
□ altro	30	28	46	43	48	94

non chirurgico = non-surgical

rachide = rachis

altro = other

#### Number of patients admitted to intensive care divided according to speciality:

4. anaesthesiological support in the hemodynamics and electrophysiology laboratory for diagnostic or intervention procedures (over 500/year). Such procedures mostly require either conscious or deep sedation of the patient;
5. anaesthesiological support for patients undergoing radiological and endoscopic investigations under general anaesthetic or conscious/deep sedation;
6. counselling for patients in critical conditions in other units who require reanimation support and/or a transfer to intensive care;
7. clinical anaesthesiological activities (over 1400/year).
